# Q.What is a drone?

A.A Drone is a unmanned flying device that uses a remote control. Some drones have camera attached to them but not always. A drone is good. Some drones might be used for service like delivering packages. A air drone is something you can hold,touch,take home,and play so it is a good.

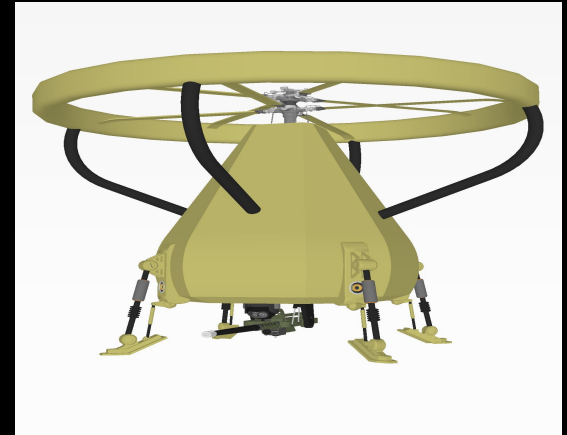

This is a air drone. --->

# Q. When was the first drone introduced?

A. Drones started being used after world war two and used for war and for military reasons. Then 55 or 56 years later they were used for toys and stuff.

This is the first air drone **introduced**

# Q.What is the future of drones?

A.Since they were first used long ago drones have changed because now they are used for more than military reasons. They can go to places people can't reach like the other side of the world.

- ❑ Drone. something that uses a control.
